

Ultrasonic Investigation of the Pressure-Temperature Phase Diagram of κ -(BEDT-TTF)₂X Quasi-Two-Dimensional Organic Conductors

Mario Poirier

Département de physique
Université de Sherbrooke

Graduate Students:

David Fournier
Kamal Frikach

Technician: Mario Castonguay

Chemist: K. D. Truong

Research grants:

Natural Sciences and Engineering Research Council of Canada (NSERC)
Fonds Québécois de la Recherche sur la Nature et les Technologies (FQRNT)

1

Outlines

1) Ultrasound in organic conductors:

motivations and goals

2) Structural and physical properties:

κ -(BEDT-TTF)₂X compounds

κ -(BEDT-TTF)₂Cu[N(CN)₂]Cl phase diagram

3) Ultrasound experiment

adaptation of the pulse echo method
pressure measurements

4) Results and discussion

κ -(BEDT-TTF)₂Cu[N(CN)₂]Br, κ -(BEDT-TTF)₂Cu(SCN)₂
first ultrasonic measurements in a pressure cell using a liquid

κ -(BEDT-TTF)₂Cu[N(CN)₂]Cl

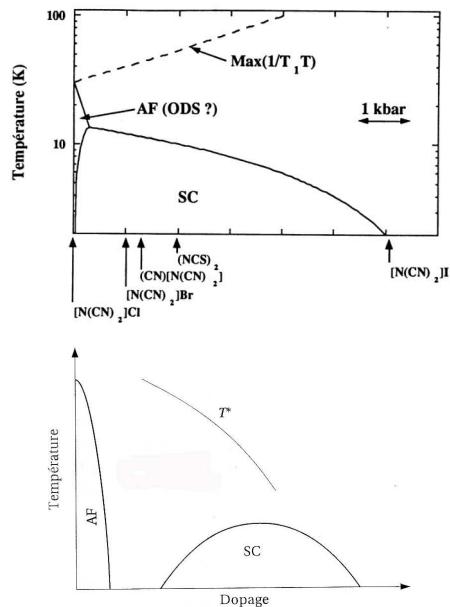

recent ultrasonic measurements in a pressure cell using helium gas

5) Conclusions

2

1. Ultrasound in organic conductors: motivations and goals

- Similarity of κ -(BEDT-TTF)₂X salts with HTSC

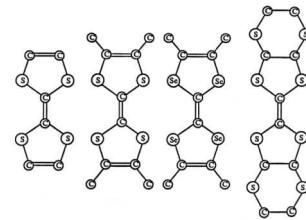

- Quasi-two-dimensional systems
- Unconventional superconductivity
- No ultrasonic measurements: crystals too small

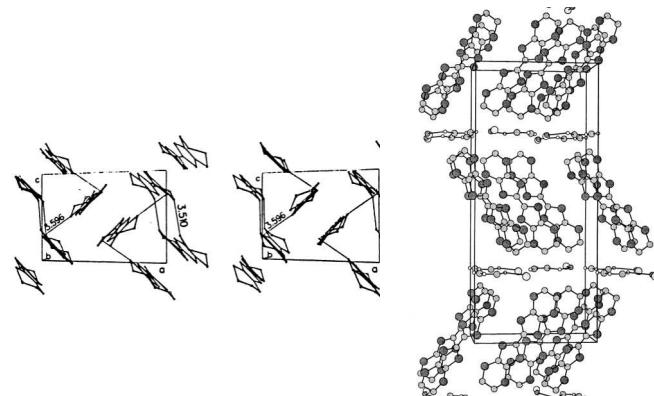

3

2. Structural and physical properties

- TTF, TMTTF, TMTSF, BEDT-TTF molecules

two-dimensional κ -(BEDT-TTF)₂X compounds

4
