

Interacting Fermions in Optical Lattices

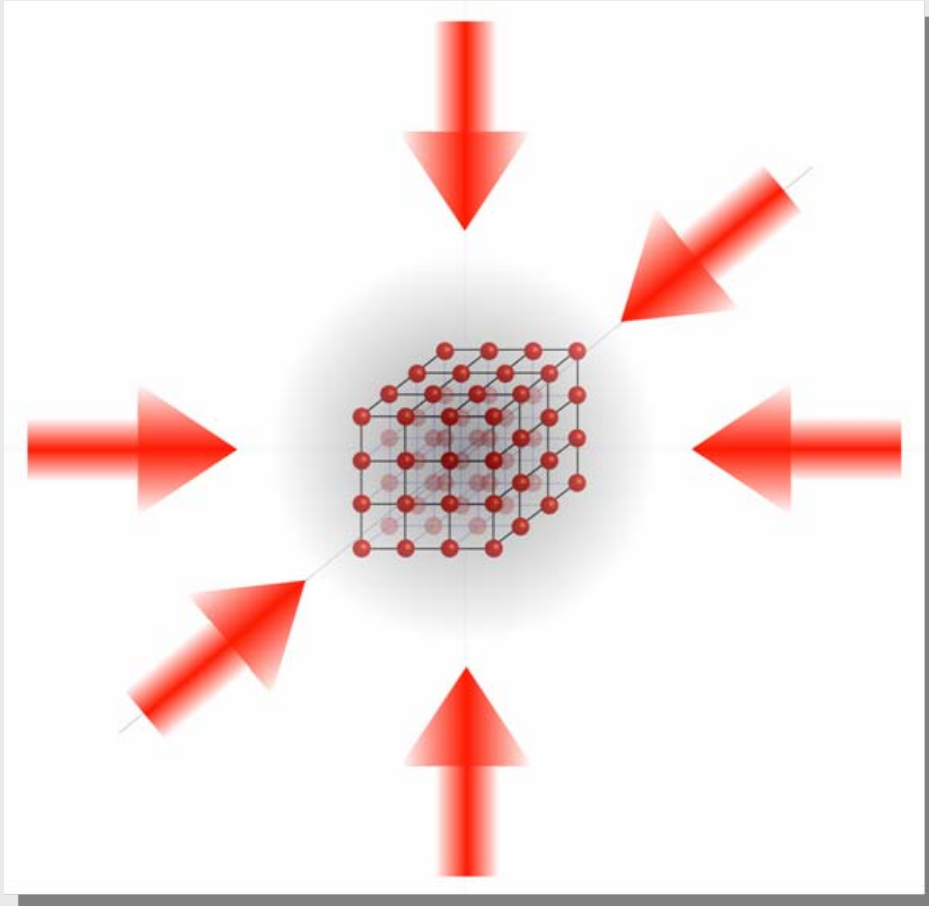

Henning Moritz

K. Günter, N. Strohmaier, R. Jördens,

Y. Takasu, T. Stöferle, M. Köhl, T. Esslinger

ETH Zürich

3D Optical Lattice

Fermions: ^{40}K (typically $\sim 10^5$)

Bosons: ^{87}Rb

Optical Lattice: 826nm

*3D lattice with fermions:
ETH, Hamburg, MIT, Mainz,
Lens*

*3D lattice with bosons:
Munich/Mainz, ETH, NIST,
Innsbruck, LENS, MIT,
Penn, MPQ, Hamburg,*

•Potential = simple cubic lattice + confining potential =

Ideal Fermi gas in a 3D lattice

Strong interactions & molecules

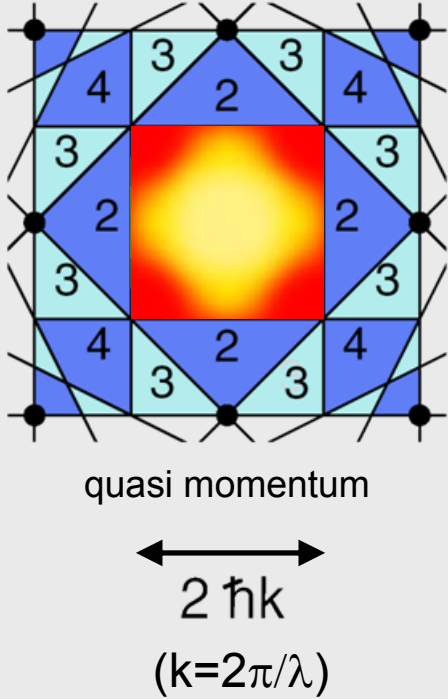

Transport of interacting fermions

Bose-Fermi mixtures

Filling the lattice

Brillouin zones of a square lattice

The inhomogeneous lattice

characteristic filling:

$$\frac{1}{2} m! \omega^2 = J$$

$$\frac{1}{\epsilon} = \frac{N}{(d=3)^3}$$

- atom number N
- external confinement ω
- tunneling J

M. Rigol and A. Muramatsu PRA 70,043627 (2004)

Observed Fermi surfaces

“conductive state“

“band insulator“

characteristic
filling

Ideal Fermi gas in a 3D lattice

Strong interactions & molecules

Transport of interacting fermions

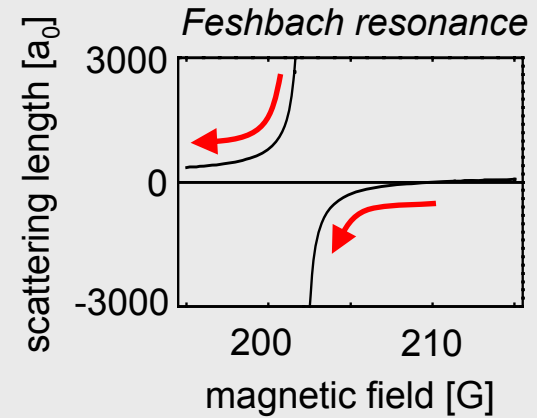

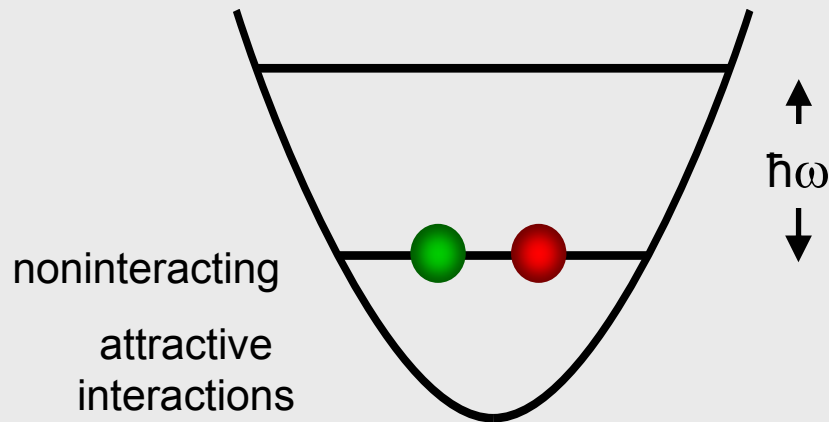

Bose-Fermi mixtures

Interacting harmonic oscillator

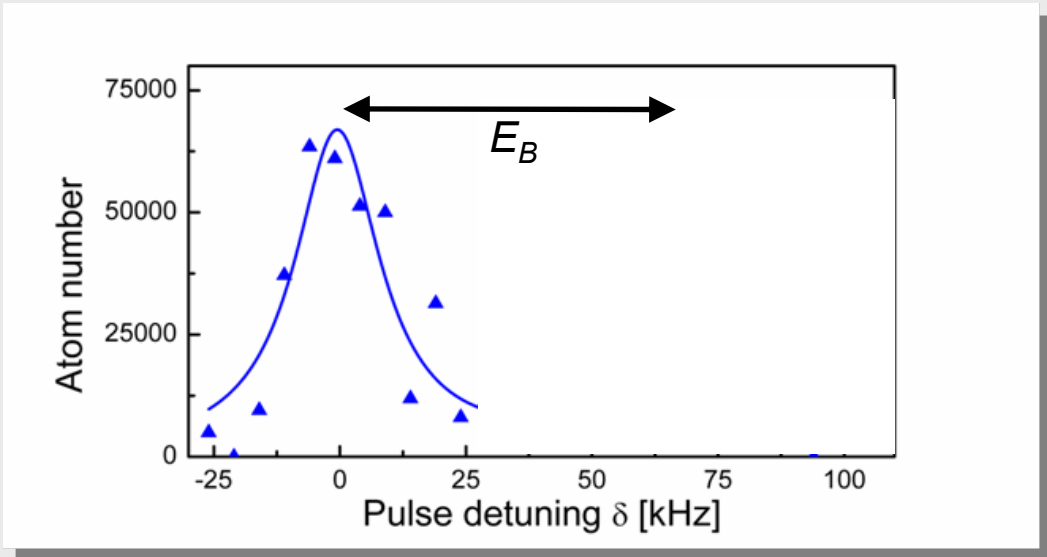

deep lattice = array of harmonic oscillators

Creating molecules

RF spectroscopy in the lattice

Measuring the binding energy

T. Busch et al., Found. Phys. 28, 549 (1998)

*Exact theory
(no free parameters!)*

Fermionic atoms transform into bosonic molecules!

Thilo Stöferle, H. M., K. Günter, M. Köhl, T. Esslinger, Phys. Rev. Lett. 96, 040301 (2006)

Thermometry in the lattice

Temperature determines the fraction of doubly occupied lattice sites.

M. Köhl, *cond-mat/0510567*.

see also: H. G. Katzgraber et al., *cond-mat/0510194* and for bosons: G. Pupillo et al., *cond-mat/0407075*.

Ideal Fermi gas in a 3D lattice

Strong interactions & molecules

Transport of interacting fermions

Bose-Fermi mixtures

Observing transport

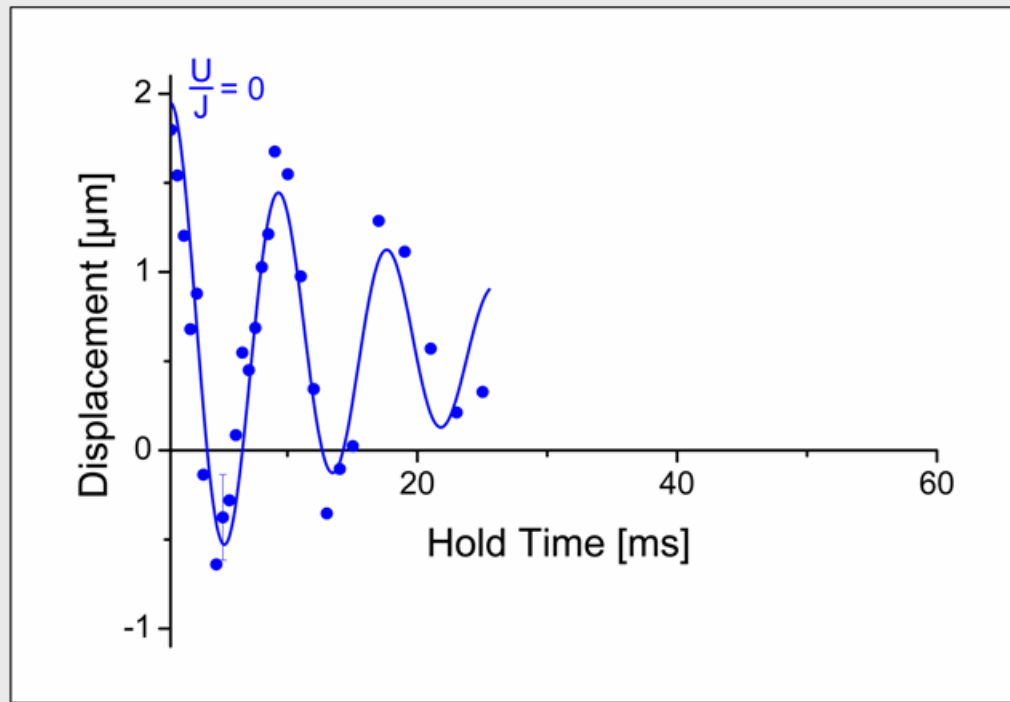

C. D. Fertig et. al, Phys. Rev, Lett, 92, 120403 (2005)

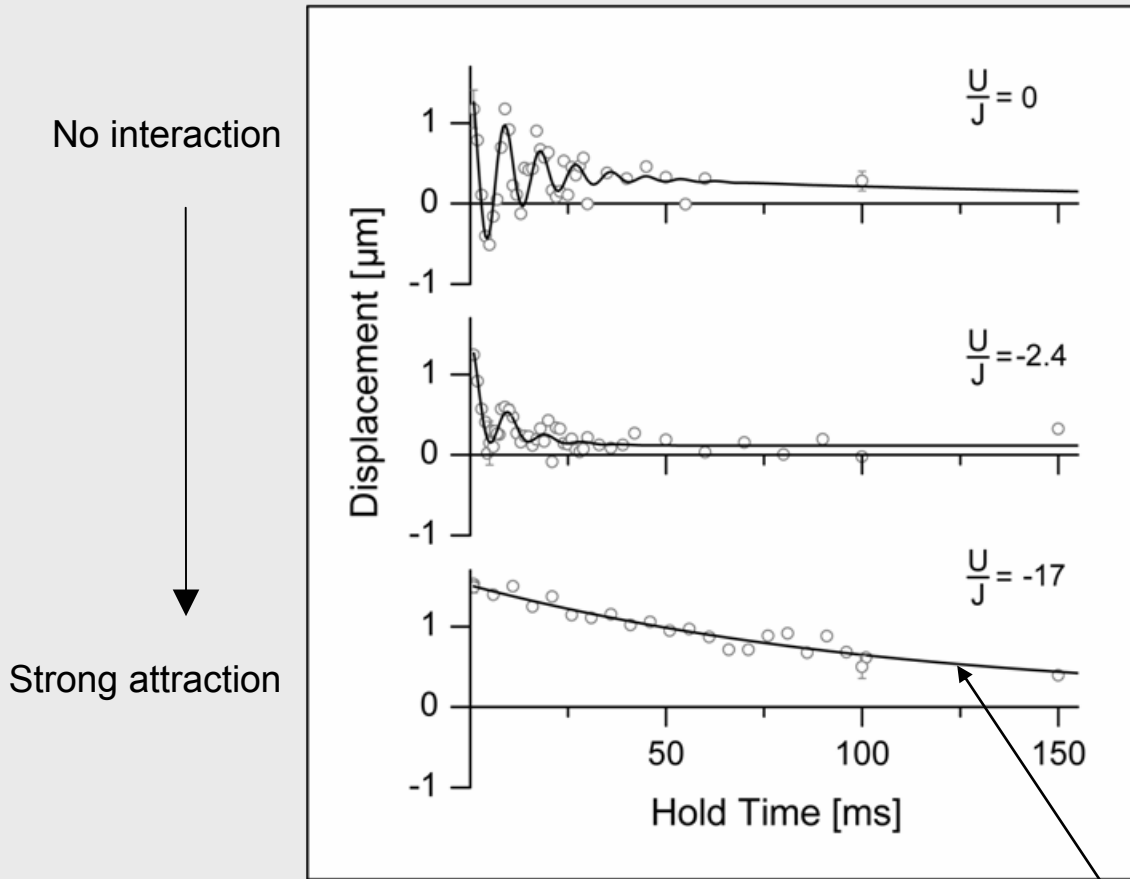

H. Ott, E. de Mirandes, F. Ferlaino, G. Roati, G. Modugno, and M. Inguscio, Phys. Rev, Lett, 92, 160601 (2004)

Observing transport

Lattice depth $5 E_R$, \sim half filling in the center

Inhibited Transport

pair tunneling

$$J_{\text{pair}} \gg \frac{J}{60}$$

effective tunneling

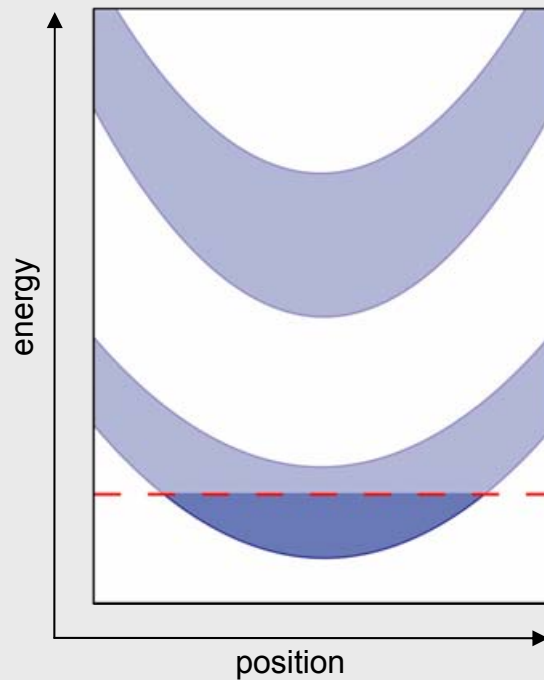

$$J_{\text{eff}} \gg J \phi \frac{J}{U}$$

$$y(t) = y_0 + A e^{-\gamma t}$$

Drift Rate

Characteristic filling

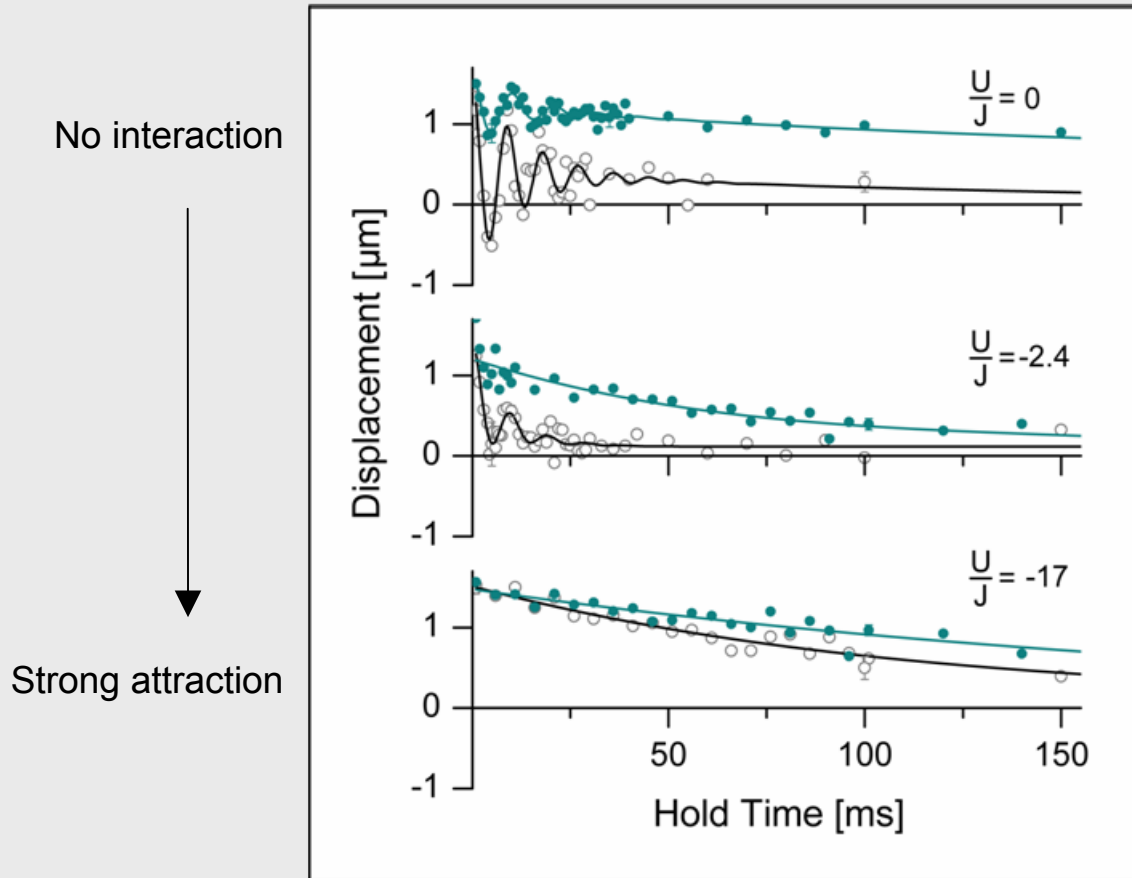

characteristic filling:

$$\frac{1}{2} m!^{232} = J_{\text{eff}}$$

$$\frac{1}{\epsilon} = \frac{N}{(3=d)^3} / \frac{1}{J_{\text{eff}}^{3=2}}$$

Full filling

full filling in the center
~ half filling in the center

Ideal Fermi gas in a 3D lattice

Strong interactions & molecules

Transport of interacting fermions

Bose-Fermi mixtures

Adding fermions to a Bose condensate

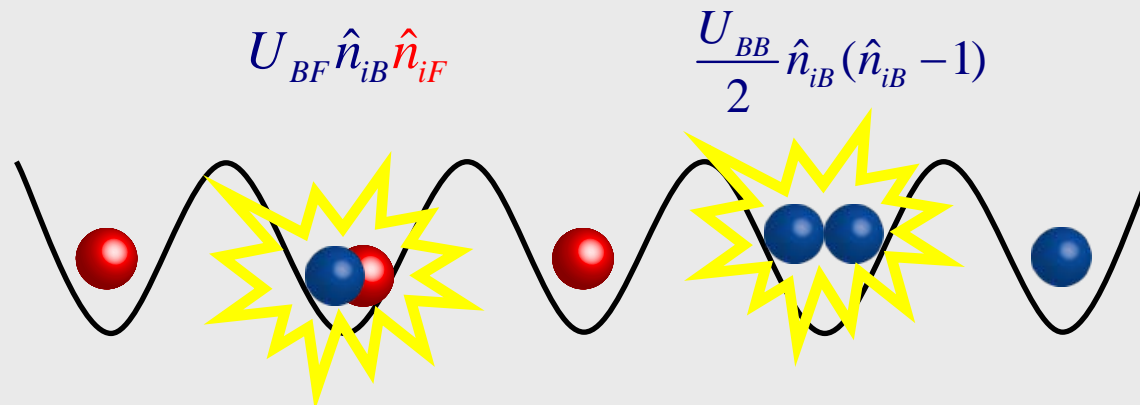

- Depletion of the Bose-Einstein condensate
- Polarons, fermion-phonon coupling with $v_F = v_S$
- Composite fermions
- Similar to $^3\text{He}/^4\text{He}$ mixtures but on a lattice

Bosons and fermions in a lattice

tunneling

$$\frac{J_F}{J_B} \gg 1$$

interactions

$$U_{BF} \hat{n}_{iB} \hat{n}_{iF}$$

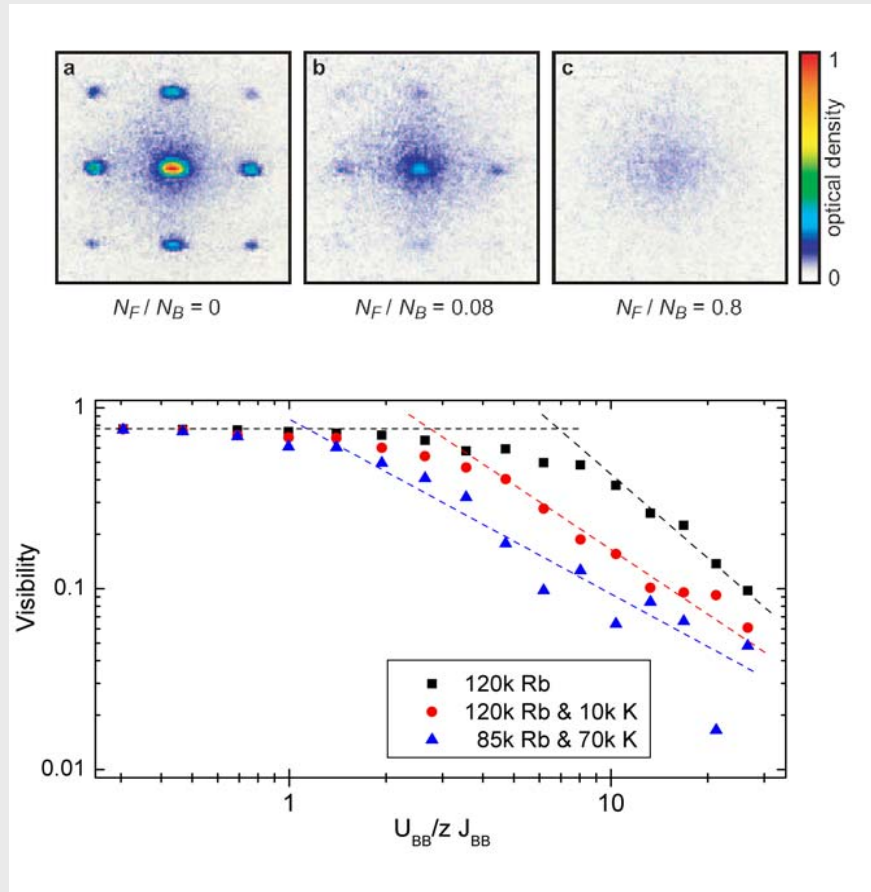

$$\frac{U_{BB}}{2} \hat{n}_{iB} (\hat{n}_{iB} - 1)$$

U_{BF} : attractive

U_{BB} : repulsive

$$\frac{U_{BF}}{U_{BB}} \approx -2$$

Experimental results

K. Günter, T. Stöferle, H. Moritz, M. Köhl, T. Esslinger, Phys. Rev. Lett. 96, 180402 (2006)
