

# Geomagnetic Reversals

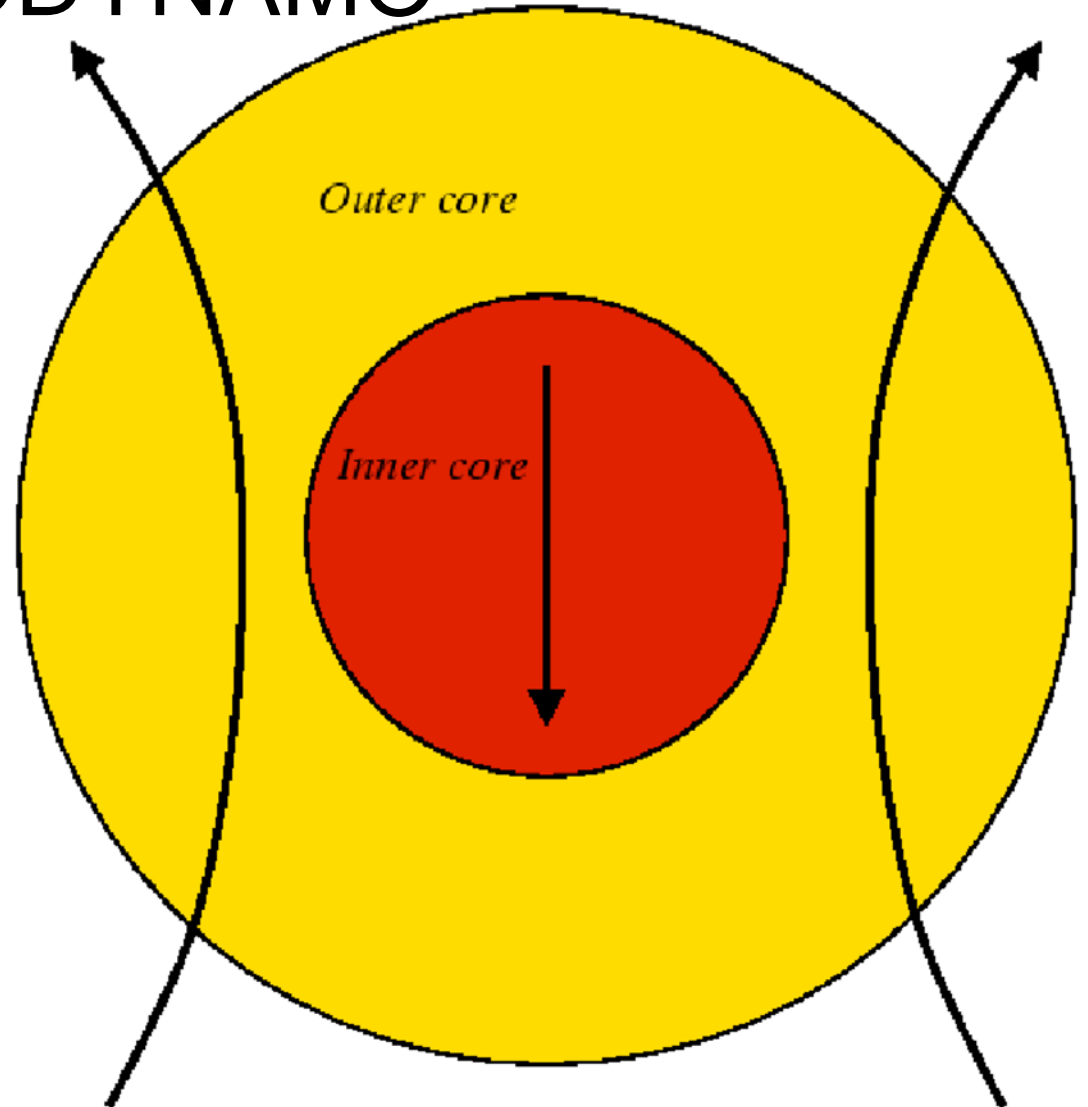

*David Gubbins*  
School of Earth & Environment  
University of Leeds UK

*KITP Dynamo Theory Workshop May 2008.*

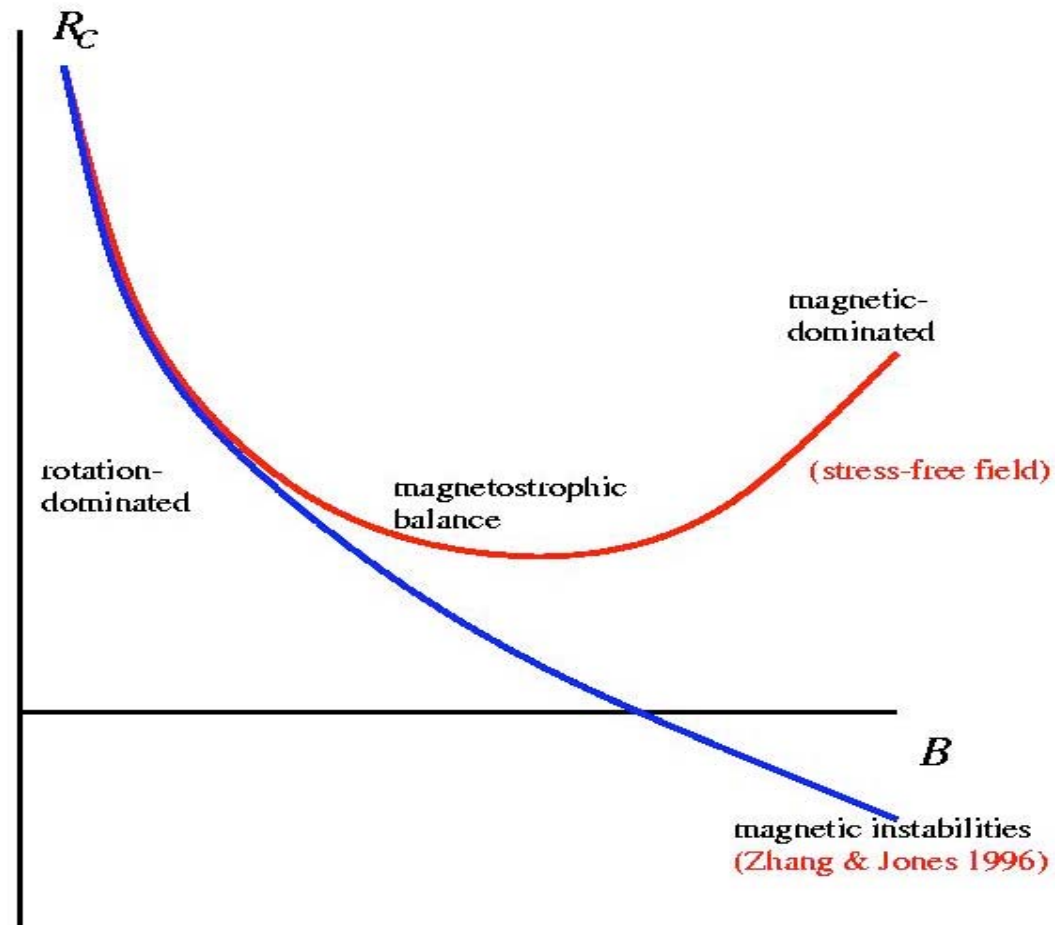

# STABILISING THE GEODYNAMO

Time scale to change  
B in outer core: 500 yr

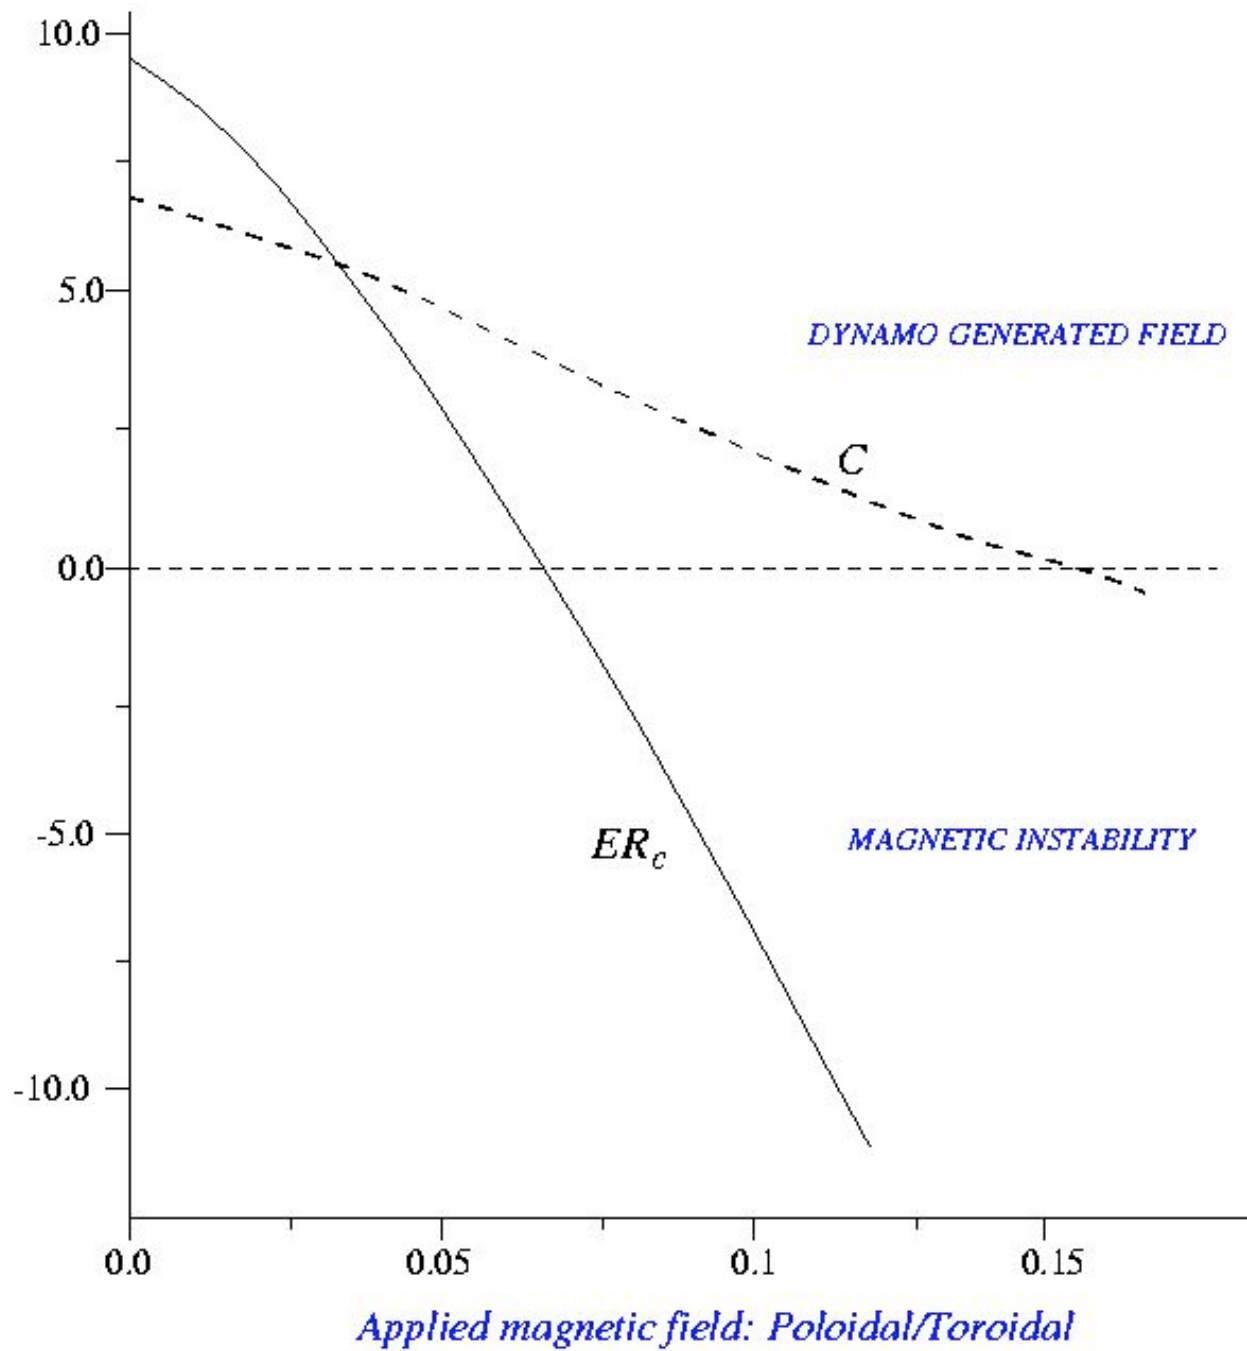

Time scale in inner  
core (diffusion) 5 kyr

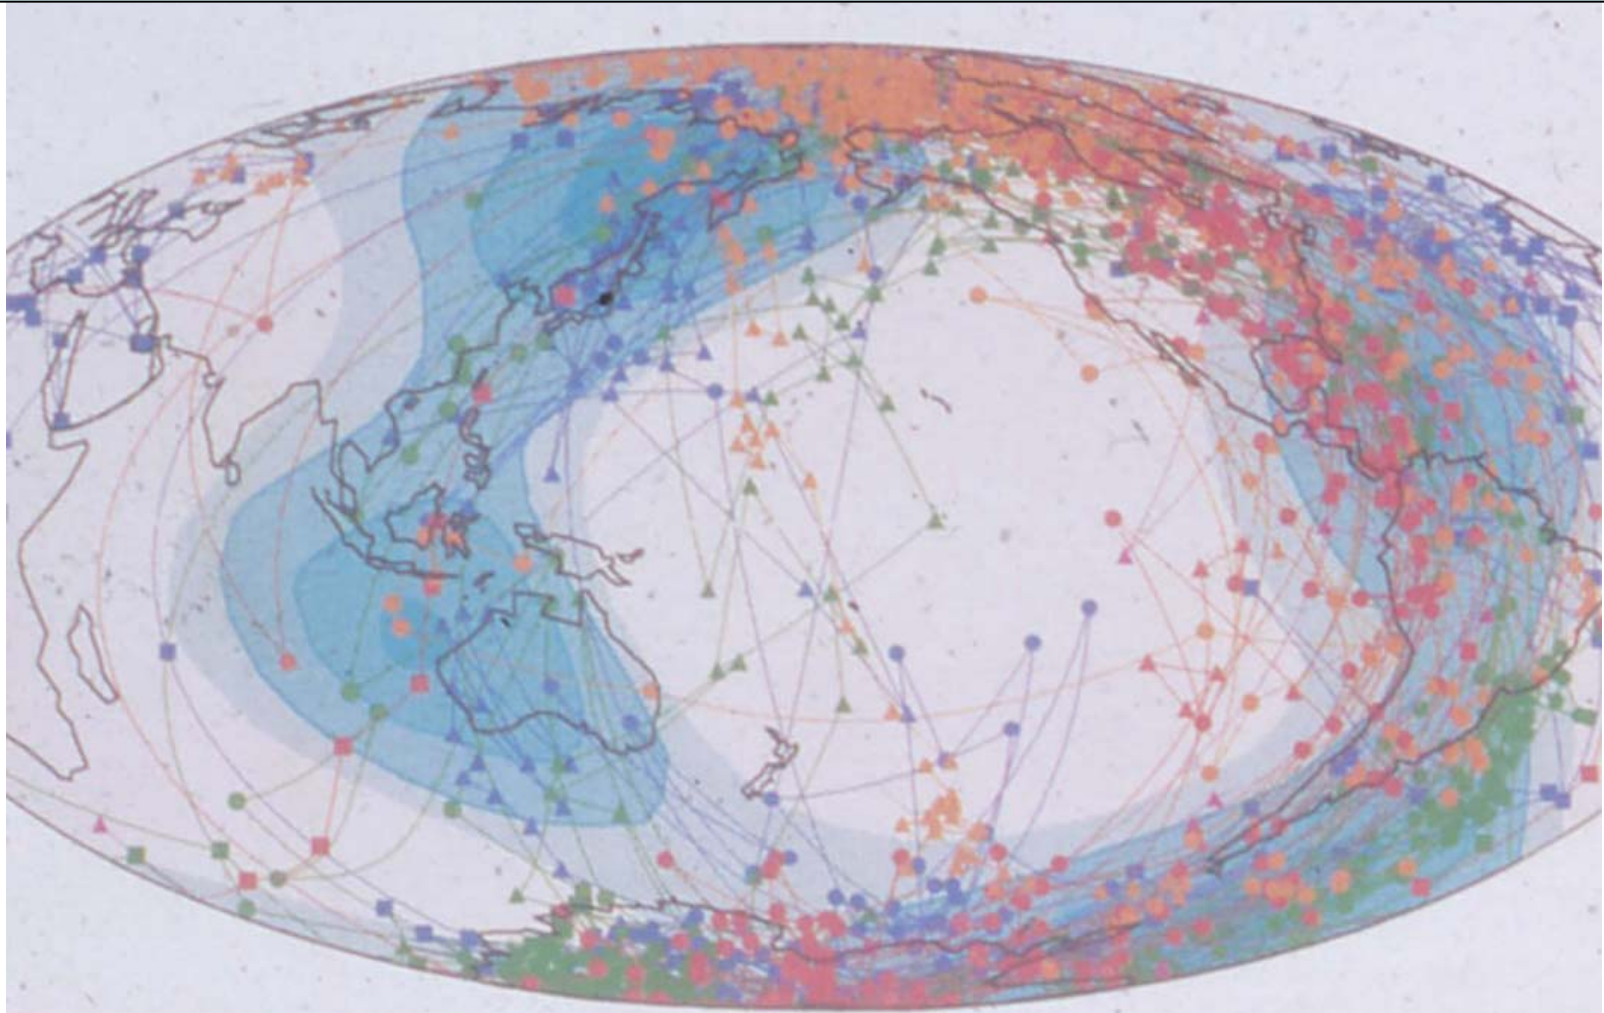

## NON-MAGNETIC CONVECTION IS HARDER TO DRIVE

- $Ra(B)$  does not have a minimum except for force-free fields
- $Ra = 0$  may be a stable limit for a strong-field dynamo

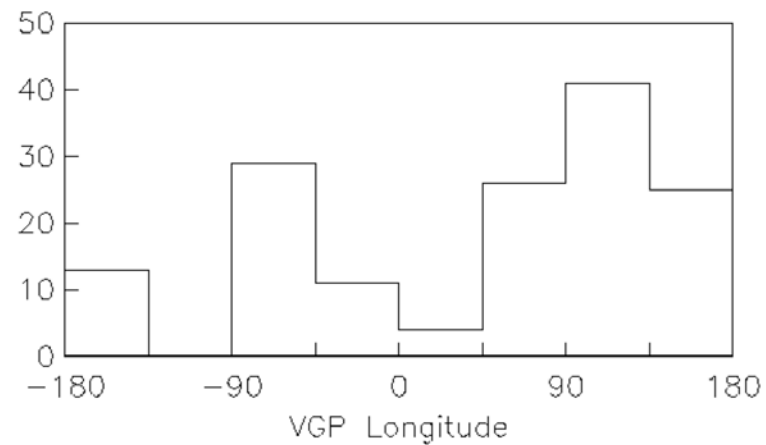

[Zhang & Jones 1996]

# GEOMETRY OF GEOMAGNETIC REVERSALS

VGPs of MBD97

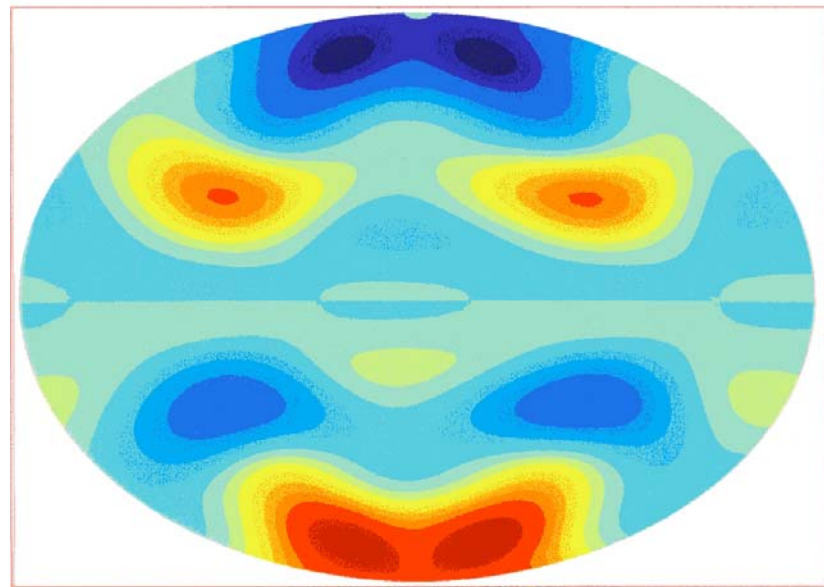

**Matuyama-Brunhes, after  
Love & Mazau (1997)**

Gubbins & Sarson (1994). Radial field, time = 0.

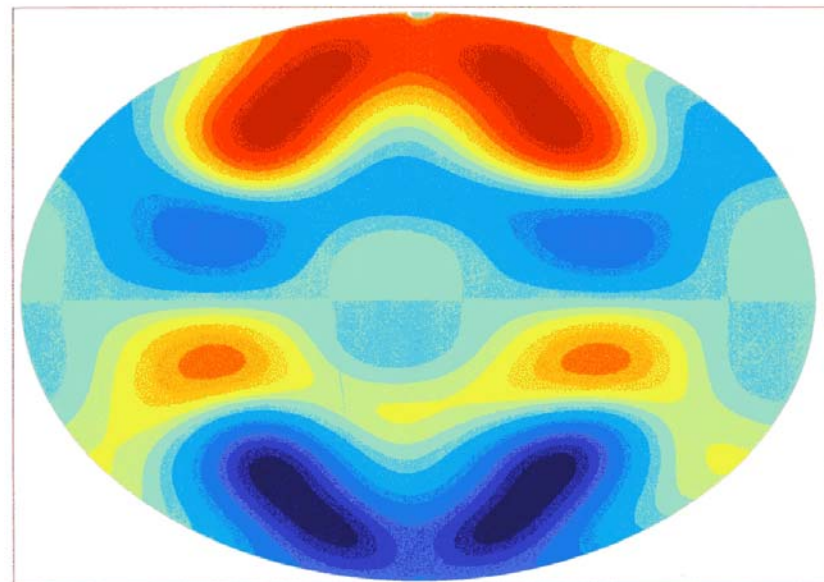

Gubbins & Sarson (1994). Radial field, time = 1/4 cycle.

Gubbins & Sarson (1994). Radial field, time = 1/2 cycle.

Gubbins & Sarson (1994). Radial field, time = 3/4 cycle.
